## FAULT CODE READER | SERVICE RESET TOOL

**BMW (-03)**  
Petrol models

Part No. 77083

### Instructions

## Attention

**Use these CODE Definitions WISELY:**

The code definitions contained in this manual should be regarded as a starting point for diagnosing a problem. The codes that your BMW generates can be misleading.

Before spending your money on a repair or replacement parts, make sure you have a clear understanding of the problem by using additional sources of information, such as a good quality repair manual, expert advice, the Internet, etc...

**Note:**

When codes start with a "C" this applies to BMWs manufactured after 2002 and will be followed by a 4 digit number

I.e.: C-88-88 would be displayed

## Common Problems | Troubleshooting Guides

### **ERROR MESSAGE: E10**

“E” means the car is not responding to the tool:

This often happens when the data line (also called “diagnostic bus”) inside the car is “hung” or disabled. Occasionally the tool will display the message “E” followed by a number (most commonly 10 or 11) when an attempt is made to read codes or to reset the MIL light (Check Engine or Service Engine Soon)

### **Things to try to resolve the flashing “E”:**

1. Insertion Depth: .....
2. Check the insertion depth of the connector. If it is not fully inserted the unit will not work.
3. Pin 19: Observe that pin 19 of the diagnostic connector is not recessed.
4. A number of models in the early 1990s had pin 19 improperly installed.
5. Cycle power: Plug in tool, cycle the ignition key on and off two or three times (do not start engine)
6. Other warning lights: Observe that no other malfunction indicator lights are on. Often a malfunctioning module (i.e. DME, EGS/transmission, ABS traction control, etc...) can impair or “hang” the diagnostic bus.
7. Power resetting of all modules (entire car)

**Note:** before doing this procedure, get your radio security code from the dealer.

- a. Disconnect the main car battery.
  - b. Activate the emergency flasher lights (this will fully drain all power from all ECUs) wait 5 minutes
  - c. Reconnect the main battery and try the tool again.
8. Module Troubleshooting: If you suspect a particular module is malfunctioning or damaged, you may wish to consult repair documentation for the car and attempt to isolate the problem by removing the module from the diagnostic bus.

**WARNING:** The following procedure is for qualified mechanics only.

ABS service bulletin 34 01 96:

BMW circulated a service bulletin and low cost repair advice detailing the malfunction of the ABS unit ground wiring which caused diagnostic bus problems on a large number of BMWs. This is often the problem on BMWs built prior to 10/1994 that are getting the “E” message on the tool.

Trying the tool on a similar BMW

If you have access to a similar BMW, you can rule out the tool as the source of the problem by trying it on that car. If it either reads or resets without the E message, then you can narrow your attention to the car.

The tool will not serve its intended purpose if the diagnostic bus is impaired by a malfunctioning control module. If one of the modules is inhibiting communications it is necessary to visit a BMW dealer or qualified repair facility to diagnose and fix/replace the bad module.

**Check Engine Light on the dashboard, indicates the DME has detected a problem**

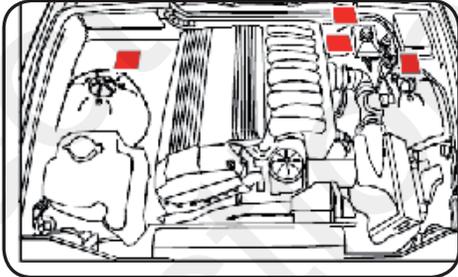

<b>A/C</b> .....	Air conditioner
<b>ABS</b> .....	Anti-lock Brake System
<b>ASC</b> .....	Skid control (see “Intervention”)
<b>ADS</b> .....	Aux Throttle Position Motor
<b>AHK</b> .....	Active Rear Axle Kinematics
<b>BLS</b> .....	Brake Light Switch
<b>CC</b> .....	Check control
<b>CO</b> .....	Carbon Monoxide
<b>DDE</b> .....	ECU for Diesel Engine
<b>Diagnostic Connector</b> .....	Where the tool plugs into the car.
<b>Decimal</b> .....	Numeric format the dealer diagnostic machines report codes in.
<b>DISA</b> .....	Intake runner length tuning mechanism
<b>DME</b> .....	Engine ECU (Petrol engine): Monitors and controls all engine sensors and functions
<b>Fault Code:</b> .....	A “code” stored in the DME memory bank that indicates a past or present problem.
<b>DSC</b> .....	Dynamic Stability Control
<b>DWA</b> .....	Alarm system
<b>E</b> .....	Communications error: See “Flashing E below
<b>EGS</b> .....	Electronic Automatic Transmission
<b>EKAT</b> .....	Electrically heated catalytic converter
<b>EKM</b> .....	Electronic Body Module
<b>EML</b> .....	Electronic Throttle Control
<b>EVAP</b> .....	Relates to fuel vapour recovery often this code indicates a loose gas cap
<b>EWS</b> .....	Drive away protection (alarm system)
<b>Fuel Trim</b> .....	Adjustments to maintain proper air fuel ratio (see Lambda Control)
<b>GM</b> .....	General Module
<b>Hex</b> .....	The tool shows codes in a format called Hexadecimal.
<b>Intervention, MSR, ASC</b> .....	Intervention is when another control unit (i.e. skid control) requests a power/torque change from the DME. Code indicates DME assessed the request as being incorrect or too long.
<b>Lambda Control</b> .....	Code means DME is unable to maintain requisite air/fuel ratio due to external factor (air leak, bad injector, sensor, etc...). (Also see fuel trim)
<b>LDP</b> .....	Loss Diagnosis Pump
<b>Load Calculation cross</b> .....	When actual air flow exceeds +/- 25% of calculated air flow check (HFM vs. TPS)
<b>MDK</b> .....	Motorized Throttle Valve
<b>MIL</b> .....	Malfunction Indicator Lamp, also called the “Check Engine” or “Service Engine Soon lamp
<b>MLF</b> .....	Multi function Steering Wheel
<b>MSR</b> .....	Drag Torque Intervention (torque reduction for anti skid) see Intervention above

<b>NTC</b> .....	Coolant temperature sensor
<b>Oil service &amp; Inspection</b> .....	Also called Si (abbrev. For service interval) maintenance reminder lights
<b>PWG</b> .....	Pedal Sensor Potentiometer
<b>QL</b> .....	Idle air mass adaptation (see Fuel Trim)
<b>R5/FCX:</b> .....	The scan/reset tool. Subject of this manual
<b>RAM</b> .....	DME random access memory
<b>ROM</b> .....	DME program memory
<b>Scan Tool:</b> .....	Generic term for the R5/FCX
<b>Service Engine Soon</b> .....	On the dashboard indicates the DME has detected a problem.
<b>SI</b> .....	Service Interval
<b>SMG</b> .....	BMW Motorsport Sequential Gearbox
<b>SRS</b> .....	Airbag
<b>TD</b> .....	Tachometer Signal
<b>TEV</b> .....	Evap, fuel tank vent / purge valve
<b>Ti Additive:</b> .....	Idle fuel adaptation (see fuel trim)
<b>Ti multiplicative:</b> .....	Adaptation a percentage +/- of injector time (see Fuel Trim)
<b>TR signal</b> .....	From DME, RPM and valve position
<b>VANOS</b> .....	Adjustable Valve Train
<b>VDS</b> .....	Vehicle Description System. VIN Digits 4- 7
<b>VIN</b> .....	Vehicle identification number.
<b>ZAB</b> .....	See ASC
<b>ZKE</b> .....	Central Body Electronics

## Location of Diagnostic Connector

### BMW's built 1987 to year 2000

The 20 pin diagnostic connector is located in the engine compartment. The image shown below left gives a general idea of where the connector can be found depending on year and model and the picture show what the connector looks like.

Areas marked red show the possible location of the diagnostic connector.

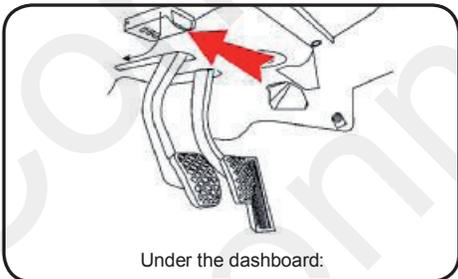

Uncovered 20 Pin of the diagnostic connector.

All BMWs built **1989 ~ 1999** have the above connector - no exceptions. Mid 2000 forward is when BMW began to phase out the above connector in favour of the 'OBD II' connector (below).

### BMW's built 2001 and Later (Connector Located inside the Car)

To locate the OBD II (16 Pins) Diagnostic Connector, open the driver's door, kneel down and look up at the underside of the dashboard.

You will see the diagnostic connector near the pedals, above the driver's left leg. Look for the rectangular access panel, (often embossed with the letters OBD) with a rounded thumb grip you will use to snap it off. The cover will swing downward revealing the 16 pin diagnostic connector inside.

Under the dashboard

Access panel

Unable to locate the connector at the first instance?

Try looking on the passenger side of the centre console, or to the left of the drivers left leg.

**Note:** A small number of 2001 and later models also have the 20 pin connector, such as the 2001- X5 and the Z3 up to 2003.

# Instructions

Function	
LED Display	Shows menu selections, activity and fault codes
Select	Used to review and select the available functions
OK	After using Select button to choose a function. The OK button causes the function to execute.

## Operation:

1. With the engine OFF, plug the tool into diagnostic connector. Ensure it is securely plugged in.
2. Turn ignition key to ON position. (DO NOT START ENGINE)
3. Tool is ready to use when it displays:

Use the “Select” button to select one of the functions as listed below:

4. Press “OK” button to execute the function.
5. Read Fault Code:

- The tool automatically starts in this mode, (though it won't read the fault codes until the “OK” button is pressed).
- When OK is pressed, the unit will attempt to read the fault codes.
- If it finds faults, it will automatically display the number of the code table to use (see Error Code Tables).
- To then view the faults press OK, repeat until the end of the fault list
- Tool will show (--).
- Press OK to return to (Fc)

## Clear Fault Codes and MIL Reset:

- When you have selected cE in the display, you are now ready to reset the MIL (malfunction indicator lamp) (Resets “Check Engine” or “Service Engine Soon”).
- Pressing OK button will execute the reset.

- When finished it will return to Fc. This clears all faults and extinguishes the MIL.
- To verify the reset, UNPLUG the tool and start the engine- MIL should be off. (Note: After a MIL reset on some models with Automatic Transmission, the Automatic Transmission Light will be on. To clear it, simply start the engine twice.)

## Engine Lamp will not reset:

- When the MIL is on, if the lamp will not reset, yet no codes are found this can be caused by one of two things; most common: the car has automatic transmission related faults which can occasionally trigger an engine MIL. Another possible cause is the engine MIL circuit from the Engine ECU to the instrument cluster is open.

### Oil Service Reset:

- When you have selected oL in the display, it is ready to reset the “oil service” light.
- Pressing OK button will execute the reset.
- During the reset procedure the display will count from 0 to 2. When it has finished, the display will return to Fc.

### Inspection Reset:

- When you have selected “In” in the display, you are now ready to reset the “inspection” light.
- Pressing OK button will execute reset.
- During the reset procedure the display will count from 0 to 9.
- When it has finished the display will return to Fc.

### WHEN SERVICE LIGHT RESET FAILS:

Commonly a reset was attempted before one of the Oil service or Inspection lights came on but the five green lights did not illuminate.

- The computer was counting down to a different service interval than the one you tried to reset.
- There is no way to know if the next light will be Oil service or Inspection.

Some BMWs will not reset prior to the illumination of the Oil service or the Inspection lights. In all cases we advise you to wait for the Oil service or Inspection light to come on before attempting a reset.

In other words, if there are any green “countdown” lights remaining; do not attempt a reset because it probably won’t work. Another cause of the service light not resetting is the tool type. If your BMW has the round diagnostic port under the hood, you can only reset the service lights through that round under-bonnet port.

### SERVICE LIGHT BATTERY PROBLEMS:

(Note: only applies to BMWs older than 1989)

The Tool is not giving error messages and appears to be working normally but one of the following conditions occurs:

- The reset seemed successful but the service lights come back on shortly after the reset was done.
- The service lights stay on while the ignition is off and the key is out of the ignition switch.
- The service lights flash off and on.
- The service lights will not reset at all.
- The tachometer, temperature gauge, or fuel economy gauge seem erratic (meter needle jumps rapidly) or have quit working completely.

The list of problems above indicates a dying or dead backup battery on your S.I. (Service Interval) computer circuit board. When this “backup” battery dies, the S.I. computer has to re-start every time you start your car, at which point an “Inspection” light will be indicated.

Winter storage without a trickle charger is the most common cause of premature S.I. battery failure. These specialized batteries have a life expectancy of approximately 4 to 7 years. Replacing the S.I. batteries takes about 90 minutes from start to finish and requires that you know how to operate a soldering iron.

## Twin ECU – 12 cyl:

Fill and cll displays as shown apply only to 12 cylinder BMWs, all of which have two Engine ECU's. It is the exact same operating procedure like Fc and cE (see above), except you are reading the 2nd ECU.

### 1987 ~ 1995 BMW Models:

If the tool displays "FF" for the table designator, note the year and model of the BMW (and the VDS number if necessary) and find the car in table A.

**Note:** VDS number is digit 4 thru 7 in the VIN: WBABB23LAE68973

## Code table FF fault code table locator

2d0b	Throttle valve heater, Relay	2E25	Ignition coil, Cyl. 2	2F4b	DME digital motor electronics, internal failure: EWS (electronic vehicle immobilization) data
2d0c	Throttle valve, defrosting	2E26	Ignition coil, Cyl. 3	2F4c	Message of NSM/Edgelm to electronic vehicle immobilization/digital motor electronics
2d0E	Air mass meter, electrical	2E27	Ignition coil, Cyl. 4	2F4E	Vehicle speed, signal
2d0F	Air mass meter, signal	2E28	Ignition coil, Cyl. 5	2F4F	Vehicle speed, plausibility
2d15	Air mass sensor, metering range	2E29	Ignition coil, Cyl. 6	2F58	Start automatics, input signal
2d16	Air mass meter, signal	2E30	Injection valve Cyl. 1, input signal	2F63	Brake light switch, plausibility
2d18	Manipulation protection, max air mass	2E31	Injection valve Cyl. 2, input signal	2F64	Brake light test switch, plausibility
2d1b	Accelerator pedal module, pedal sensor signal 1	2E32	Injection valve Cyl. 3, input signal	2F65	Brake booster, system check
2d1c	Accelerator pedal module, pedal sensor signal 2	2E33	Injection valve Cyl. 4, input signal	2F66	Brake booster, electric ATIC39
2d1d	Accelerator pedal module, pedal sensor 1, voltage supply	2E34	Injection valve Cyl. 5, input signal	2F67	Clutch switch, signal
2d1E	Accelerator pedal module, pedal sensor 2, voltage supply	2E35	Injection valve Cyl. 6, input signal	2F6c	Exhaust flap, input signal
2d1F	Accelerator pedal module, pedal sensor potentiometer, signal	2E68	Knock sensor signal 1	2F71	E-box-fan, input signal
2d20	Accelerator pedal module, pedal sensor, plausibility between signal 1 and signal 2	2E69	Knock sensor signal 2	2F76	Ambient pressure sensor, signal
2d28	Differential pressure sensor, suction pipe: Signal	2E6A	Knock sensor signal 3	2F77	Ambient pressure sensor, plausibility
2d29	Differential pressure sensor, suction pipe: plausibility	2E74	Mixture adaptation, injector ageing: Bank 1	2F79	Ambient pressure sensor, re-running
2d2A	Differential pressure sensor, suction pipe: adaptation	2E75	Mixture adaptation, injector ageing: Bank 2	2F7A	Ambient pressure sensor, re-running

2F7b	Oil pressure switch, plausibility	30EA	NOX Cat, sulfurated	271c	Oxygen sensor after cat.
2F80	Motor shutoff time, plausibility	30Ed	Extreme knock Cyl. 1	271d	Oxygen sensor heater before cat.
2F85	DME digital motor electronics, internal failure: inside temperature sensor, signal	30EE	Extreme knock Cyl. 2	271E	Oxygen sensor heater after cat.
2F8F	Accelerator pedal module and brake pedal, plausibility	30EF	Extreme knock Cyl. 3	271F	Lambda sensor period duration ageing
2F94	Fuel pump relay, input signal	30F0	Extreme knock Cyl. 4	2720	Lambda sensor ageing TV
2F99	Ambient temperature sensor, plausibility	30F1	Extreme knock Cyl. 5	2721	Lambda sensor ageing after cat
2F9A	Ambient temperature sensor, communication	30F2	Extreme knock Cyl. 6	2722	Oxygen sensor2 before cat.
2F9E	Thermal oil level sensor	30Fc	Turbo charger, density	2723	Output heater O2-sensor before catalyst bank2
2FA3	Coding missing	30FE	Turbo charger, high pressure side	2724	Oxygen sensor2 after cat.
2FA4	Wrong data set	30FF	Turbo charger, low pressure side	2725	Lambda sensor period duration ageing bank2
2FAb	Active engine bearing	3100	Air charge control, shut-down	2726	Lambda sensor ageing TV bank2
2FAc	Active engine bearing 2, electrical	3104	Engine roughness, layer charging operation	2727	Lambda sensor ageing after cat bank2
2Fbc	Fuel pressure control valve, signal	3105	Engine roughness, layer charging operation: warming	2728	Adaptation multipl. area2
2Fbd	Fuel pressure steuer ventl, plausibility	3c1d	Crank shaft sensor: signal	2729	Adaptation multipl. area2 (bank2)
2FbE	Fuel pressure after motor stop	3c1E	Camshaft sensor: input-signal	272A	Adaptation multipl. area1
2FbF	Fuel pressure at injection release	3c1F	Camshaft sensor: output-signal	272b	Adaptation multipl. area1 (bank1)
2Fc0	Fuel pressure, measurement range	3d33	Torque request with CAN	272c	Adaptation add. per time
2Fc3	Fuel pressure steuer ventl, plausibility			272d	Adaptation add. per time (Bank2)
2Fc6	Energy save mode active	cd87	PT-CAN communication failure	272E	Adaptation add. per ignition
2Fc7	Power saving mode 2, active	cd8b	Local-CAN communication failure	272F	Adaptation add. per ignition bank2
2FA	Crank case ventilation, system check	cd8F	PT-CAN communication error	2730	Failure within the idle-speed control
2Fdb	Crank case ventilation, electric ATIC39	cd94	Message (outside temperature/relative time, 310)	2731	Camshaft control inlet - VANOS
		cd95	Message (handling FGR / ACC, 194)	2732	NW-Control of inlet B2 (8cyl)/outlet (4cyl)
3070	Cyl. same adjustment via irregular running Cyl. 1	cd96	Message (torque requirement ACC active cruise control, B7)	2733	NW-KW synchron failure
3071	Cyl. same adjustment via irregular running Cyl. 2	cd97	Message (speed demand AFS, B1)	2734	PS/MAF plausibility
3072	Cyl. same adjustment via irregular running Cyl. 3	cd98	Message (torque requirement DSC dynamic stability control, B6)	2735	TPS/MAF plausibility bank2
3073	Cyl. same adjustment via irregular running Cyl. 4	cd99	Message (torque requirement EGS electronic gear control? B5)	2736	Throttle controller PWM short test
3074	Cyl. same adjustment via irregular running Cyl. 5	cd9A	Message (torque requirement SMG, BD)	2737	EWS-manipulation control
3075	Cyl. same adjustment via irregular running Cyl. 6	cd9b	Message (vehicle mode, 315)	2738	Catalytic-converter conversion
307c	Cyl. same adjustment via Lambda Cyl. 1	cd9c	Message (speed, 1A0)	2739	Catalytic-converter conversion LSU
307d	Cyl. same adjustment via Lambda Cyl. 2	cd9d	Message (gear data, BA)	273A	Catalytic-converter conversion LSU bank2
307E	Cyl. same adjustment via Lambda Cyl. 3	cd9E	Message (gear data 2, 1A2)	273b	Throttle controller PWM long test
307F	Cyl. same adjustment via Lambda Cyl. 4	cd9F	Message (kilometer reading/coverage, 330)	273c	Throttle controller diff.
3080	Cyl. same adjustment via Lambda Cyl. 5	cdA0	Message (terminal state, 130)	273d	Catalytic-converter conversion (bank2)
3081	Cyl. same adjustment via Lambda Cyl. 6	cdA1	Message (steering wheel angle, C4)	273E	Signal temperature sensor exhaust1
30A0	Ignition coil Cyl. 1, input signal	cdA2	Message (power management battery voltage, 3B4)	273F	Signal temperature sensor exhaust2
30A1	Ignition coil Cyl. 2, input signal	cdA3	Message power management load voltage, 334)	2740	Pedal-travel1 permanently
30A2	Ignition coil Cyl. 3, input signal	cdA4	Message (status ARS active roll stabilizing module, 1AC) acceleration?	2741	Pedal-travel2 permanently
30A3	Ignition coil Cyl. 4, input signal	cdA5	Message (status DSC dynamic stability control, 19E)	2742	Misfire detection cyl.1
30A4	Ignition coil Cyl. 5, input signal	cdA6	Message (status electrical fuel pump, 335)	2743	Misfire detection cyl.3
30A5	Ignition coil Cyl. 6, input signal	cdA7	Message (status reverse gear, 3B0)	2744	Misfire detection cyl.4
30Ac	Injection valve Cyl. 1, input signal	cdA8	Message (status KOMBI, 1B4)	2745	Misfire detection cyl.2
30Ad	Injection valve Cyl. 2, input signal	cdA9	Message (heat stream/load AC, 1B5)	2746	Misfire detection cyl.
30AE	Injection valve Cyl. 3, input signal	cdAA	Message (status crash shut off EKP electric fuel pump, 135)	2747	Misfire detection cyl.
30AF	Injection valve Cyl. 4, input signal	cdAb	Message (lamp condition, 21A)	2748	Misfire detection cyl
30b0	Injection valve Cyl. 5, input signal	cdAC	Message (status water valve, 3B5)	2749	Misfire detection cyl
30b1	Injection valve Cyl. 6, input signal	cdAd	Message (requirement road wheel torque drive line, BF)	274A	Misfire detection cyl
30bA	Injector bank 1 or ECU, internal error	cdAE	Message (time/date, 2F8)	274b	Misfire detection cyl
30bb	Injector bank 2 or ECU, internal error	cdAF	Message (status trailer, 2E4)	274c	Misfire detection cyl
30bE	Injector, calibration: plausibility30C1 motor oil pressure control, statically	cdB0	Message (display gear data)	274d	Misfire detection cyl
30c0	Motor oil pressure control, dynamically	cdB1	Message (status central locking system, 2FC)	274E	Misfire detection, Checksum failure
30c1	Motor oil pressure control, statically	cdB3	Message (speed demand steering, B9)	274F	Misfire, Checksum failure, service rel.
30c2	Oil pressure regulating valve, control	cdB4	Message (transmission data 3, 3B1) missing	2752	Pedal-travel half plausibility
30c3	Motor oil pressure sensor, signal	cdB5	PT-CAN communication failure	2753	Monitoring ignition coil 1
30c4	Motor oil pressure control, mechanically	cdB8	Message speed demand DKG, B8)	2754	Monitoring ignition coil 3
30c5	Engine oil pump, mechanical: engine oil pressure	cdB9	Message (status EMF, 201)	2755	Monitoring ignition coil 4
30c6	Motor oil pressure sensor, plausibility	cdBA	Message (Stellanforderung EMF, 1A7)	2756	Monitoring ignition coil 2
30c7	Motor oil pressure system	cdBE	Message, (torque demand from DSC)	2757	Monitoring ignition coil

## Warranty

**This limited warranty cover defects in materials and workmanship for a period of twelve (12) months which begins from the date the product is purchased by the end user and is subjected to the following terms and conditions:**

- Within the warranty period, the manufacturer will repair or replace, at their options, any defective parts and return to the owner in good working condition.
- Any repaired or replaced parts will be warranted for the balance of the original warranty or three months (3) months from the date of repair, whichever is longer.
- This warranty only extends to the first owner and not assignable or transferable to any subsequent owner.
- Cost of delivery charges incurred for the repair of the product to and from the manufacturer will be borne by the owner.
- This limited warranty covers only those defects that arises as a result of normal use and does not cover those that arises as a result of:
  - Unauthorized modifications and repair.
  - Improper operation or misuse.
  - Accident or neglect such as dropping the unit onto hard surfaces.
  - Contact with water, rain or extreme humidity.
  - Contact with extreme heat.
  - Cables that have broken, bent contact pins or subject to extreme stress or wear.
  - Physical damage to the product surface including scratches, cracks or other damage to the display screen or other externally exposed parts.

### **Limitations of Warranty:**

Other than the foregoing limited warranty, the manufacturer does not make any other warranty or condition of any kind, whether express or implied.
