

## Multi-Channel Automotive Noise Finder

A five-channel electronic noise finder. Ideal for pinpointing the source of annoying noise and vibration. Can be used on chassis and suspension assemblies as well as engines, alternators, gearboxes and differentials.

### Additional Information

- Electronic noise & vibration diagnosis kit.
- 1 channel = stethoscope, 4 channels with wired alligator clip style pickups.
- Ideal for tracing chassis & suspension noises caused by worn bushes, ball joints, wheel bearings, gear box bearings, differential bearings, etc.
- Engine noises that can be traced include valve clearance, flywheel noises, clutch release bearings, bottom end bearings, alternator/dynamo bearings.
- Powered by 3x AA batteries (not included). CE compliant.
