

Steering Turntables - Aluminium 4000kg (Pair)

This pair of steering turntables allows the user to check the steering angle on full lock to ensure the steering is centralised, measure toe-in/toe-out on turns, and check caster and KPi (king pin inclination) when used with the Gunson Camber Caster and KPi Gauge (Part No. 77099). Suitable for both classic and modern vehicles, each turntable supports up to 2,000kg (4,000kg per pair). The range is $\pm 50^\circ$ in 1° increments, offering exceptional accuracy, which is particularly important for modern vehicles with variable ratio steering racks or variable rate power steering systems.

Additional Information

- Measures toe in, toe out & full lock. Use with Gunson Part No. 77099 KPi & castor gauge.
- Size: 400mm (L) x 390mm (W) x 47mm (H). Weight: 5kgs per turntable.
- Turntable diameter: 335mm, range +/- 45 degrees.
- Table movement 61mm side-to-side & front-to-back.
- Features 2x locking pins per turntable.
